MAINTENANCE AND CLEANING OF FREESTILE AND WEB FLEX

DAILY MAINTENANCE CLEANING

For daily care, the use of a vacuum cleaner with an electric powered brush is recommended (e.g. SEBO, XP Professional).

INTERIM CLEANING

The interim cleaning involves the cleaning of the entire upper pole area by a so-called 'pad cleaning'. It is not a substitute for the recommended intensive cleaning. This should be done once a year

BASIC AND INTENSIVE CLEANING

For basic cleaning, the use of a contra rotating brush machine using a crystallizing cleaner is recommended (e.g. CARPET CLEANER CC 300 or a comparable product).

Another system specially developed for intensive cleaning is the TEP-TOP-Clean® from Paul Geißler GmbH, which is recommended by the manufacturer and is ideal for proper maintenance right from the start.

STAIN REMOVAL (DETACHUR)

Any kind of stains, can be removed with the detergent from the house of JAMES and RZ Chemie.

FREESTILE

A great advantage of FREESTILE is that this textile floor covering can also be used in the HealthCare area. After cleaning, this can be treated with suitable disinfectants (e.g. Carpet Cleaner „Carpexan“ or comparable product) without any problem.

If you have any further questions, please do not hesitate to contact our technical department.
